A.R. Life Sciences Pvt. Ltd

API DISCHARGE POLICY

This is the API Discharge Policy of A. R. Life Sciences Pvt. Ltd. ("the Company") to control and minimise the discharge of Active Pharmaceutical Ingredients (APIs) and related process residues from its manufacturing operations.

The Company recognizes that unmanaged release of APIs into water, soil, and air can contribute to environmental contamination. The Company is committed to manufacturing responsibly and controlling API discharge across its operations through all employees, contractors, and other relevant stakeholders understanding and complying with this policy, and through:

- ✓ Ensuring compliance with all applicable national and local environmental laws, effluent and emission discharge standards, and Pollution Control Board consent conditions governing API manufacturing.
- ✓ Setting discharge limits for APIs
- ✓ Conducting regular testing of treated effluent for API content and other regulated parameters, using validated analytical methods and accredited laboratories.
- ✓ Investing in cleaner production technologies, solvent recovery, and process improvements that reduce the generation of API-bearing waste streams at source.
- ✓ Establishing contingency and spill-response protocols to promptly contain, report and remediate any accidental or non-compliant discharge.
- ✓ Training relevant employees, contractors and site personnel on discharge control procedures, monitoring requirements and incident reporting.
- ✓ Engaging transparently with regulators, local communities and other stakeholders on the Company's discharge performance and improvement initiatives.
