

WATER POLICY

At **A.R. Life Sciences Pvt. Ltd.**, we are committed to ensuring that water used in our manufacturing, cleaning, laboratory, and other GMP-related activities is consistently **fit for its intended purpose and meets applicable quality, safety, pharmacopoeial, and regulatory requirements**. We are equally committed to responsible management of effluent water generated from our operations, ensuring that it does not adversely affect the environment.

We are committed to:

- Ensuring that appropriate water quality is used for each intended application.
- Maintaining water systems in a **qualified, validated, and controlled state**.
- Preventing chemical, microbiological, and physical contamination of water systems.
- Conducting regular monitoring, testing, and trending of water quality to identify adverse trends at an early stage.
- Ensuring proper maintenance, calibration, sanitization, and periodic assessment of water systems.
- Ensuring that all personnel involved in water-system operation, sampling, testing, maintenance, and quality oversight are adequately trained and competent.
- Periodically reviewing the performance of water systems and implementing continual improvements based on risk assessment, trends, scientific knowledge, and applicable regulatory expectations.
- Promoting water conservation through recycling, reuse, and reduction initiatives wherever technically and quality wise feasible.
- Ensuring that effluent generated from our operations is sent to authorized third-party Common Effluent Treatment Plants for treatment prior to discharge, in compliance with applicable pollution control regulations.
- Conducting regular monitoring of effluent quality parameters to verify compliance with discharge norms and support continual improvement in wastewater management.
- Preventing contamination of surface and groundwater from our operations through proper control measures.

A.R. Life Sciences is committed to maintaining water quality as a critical element of our Pharmaceutical Quality System and ensuring that water does not adversely impact product quality, regulatory compliance, or the environment.
